

Inspect Your Buzzing Electric Panel

Is there a buzzing noise coming from your electric panel box? Want a great reason to get an electrical inspection? **A buzzing noise coming from the electrical panel is certainly that reason. Call us right now!**

Even if you are not legally required to get an electrical inspection if you hear a buzzing noise coming from your panel, you can still protect your home by calling an electrician from Electrical Connections to check things out.

If it's been more than a few years since the last inspection (or if you don't know when the last inspection was), consider it worthwhile to make the call. From the breaker box to the wiring throughout your home, much of your electrical system is invisible to you. Pests, wildlife, bad weather (especially hurricanes), and the aging process can all build up significant problems when you aren't looking.

Strange problems that we often uncover during an electrical inspection:

- Wires chewed up by squirrels or other animals
- Bad wiring and design. Think electrical receptacles placed way too close to showers or sinks
- Renovated homes with mismatched wiring and infrastructure

Most people don't call an electrician until the lights don't work. With problems like those, homeowners can continue living without necessarily realizing there is any problem. An electrical inspection helps keep you and your property safe while also preventing unforeseen problems. The professional electricians at Electrical Connections discover and anticipate problems while conducting an electrical inspection.

Instead of calling us for emergency service, why not schedule an electrical inspection when you have a free moment? Afterward, you can rest easy — **you won't be worried about your breaker box buzzing or your house burning to the ground!**

Electrical service panels require updates and possibly replacement as time goes on and the homeowner upgrades appliances and technology in the house. Sometimes older service panels simply cannot handle the power needs of modern appliances. Before you start to experience the nuisance of power outages, call Electrical Connections for a high-quality electrical panel upgrade or replacement.

First, one of our licensed inspectors will evaluate your home's entire electrical system. We have extensive experience working with both older and newer homes, and we place an emphasis on safety. In addition, we recognize that amenities like pools, jacuzzis, central air, and high-efficiency appliances create special electrical needs. We have a variety of solutions available related to additional circuit breakers and additional amperage. Our goal is keep your home's power system running smoothly – and protect you and your family.

The Wizard says a professional electrical panel inspection is a must to ensure the various systems in your home operate reliably all year long. Over the years homes have grown larger and more complex, but many times the electrical systems were designed for power needs from decades ago. High-tech appliances and electronics, in particular, need a modern electrical system to operate safely and normally.
